Algebra. When objects are too small or too large to be drawn or constructed at actual size, people use a scale drawing or a model. The scale is the relationship between the measurements of the drawing or model to the measurements of the object. The scale can be written as a scale factor, which is the ratio of the length or size of the drawing or model to the length of the corresponding side or part on the actual

Scale drawings allow us to accurately represent sites, spaces, buildings and details to a smaller or more practical size than the original. When a drawing is described as 'to scale', it means that each element in that drawing is in the same proportion, related to the real or proposed thing - it is smaller or indeed larger by a particular percentage.

Cole is an urban planner. He wants to create a small scale drawing of a city block. The block is a square with an area of 8,100 square meters. Create a scale drawing of the block using a scale factor of 0.1. So the first thing we could think about, they give us the area of the block. And it's a square block. So it has the same length and width.
