~~ASTM B557 — 15 Standard Test Methods for Tension Testing ...~~

ASTM B557 is a testing standard that covers the tension testing requirements of wrought and cast aluminum- and magnesium-alloy products, excepting aluminum foil (see test method E345 for aluminum foil test requirements). This method determines the strength and ductility of materials under uniaxial tensile stresses.

~~How to Perform ASTM B557 Aluminum and Magnesium Alloy ...~~

ASTM B557. Significance and Use. 4.1 Tension tests provide information on the strength and ductility of materials under uniaxial tensile stresses. This information may be useful in comparisons of materials, alloy development, quality control, and design under certain circumstances. 4.2 The results of tension tests of specimens machined to standardized dimensions from selected portions of a ...
