Let the number of games that the chess master plays chess on the day be x . Let y ' s talk about 11 weeks, so the range of the index is from 1 to 77.. And the sum of all the games should be less than or equal to 132 because the chess master never plays more than 11 games in a week.. Define another variable as follows:. This variable denotes the number of games the chess master plays for the first ...
