Global Nutrition Outcomes at Ages 5 to 19 : Disease ...

Chapter 8 - Using, monitoring and optimising medication (ebook) Monitoring growth is important in all children. Clearly, the aim is for all children to reach their optimal final height and weight in adulthood. However, there are also other relevant issues. A child who is underweight may be malnourished, resulting in anaemia and immune deficiency. An overweight child is at risk from raised blood pressure, type 2 diabetes, psychological problems and, in adult life, from heart disease and stroke.
