

## Chemistry Paper 42 November 12 Mark Scheme

Getting the books **chemistry paper 42 november 12 mark scheme** now is not type of challenging means. You could not abandoned going similar to ebook addition or library or borrowing from your contacts to right to use them. This is an no question easy means to specifically acquire lead by on-line. This online proclamation chemistry paper 42 november 12 mark scheme can be one of the options to accompany you in imitation of having supplementary time.

It will not waste your time. understand me, the e-book will agreed vent you other matter to read. Just invest tiny period to door this on-line pronouncement **chemistry paper 42 november 12 mark scheme** as with ease as review them wherever you are now.

This Brief presents for the first time a detailed historical overview of the development of acetylene polymers, beginning with the initial discovery of acetylene in 1836 and continuing up through the 2000 Nobel Prize in Chemistry. The polymerization of acetylene is most commonly associated with polyacetylene, which was found to be conductive when treated with oxidizing agents such as Br<sub>2</sub> or I<sub>2</sub> in the mid-to-late 1970s. In fact, under the right conditions, oxidized polyacetylenes can exhibit conductivities into the metallic regime, thus providing the first example of an organic polymer exhibiting metallic conductivity. As a consequence, the 2000 Nobel Prize in Chemistry was awarded to Hideki Shirakawa, Alan MacDiarmid, and Alan Heeger for this pioneering research, the award citation reading “for the discovery and development of electrically conductive polymers.” Because of this, most incorrectly view polyacetylene, as well as conducting polymers in general, to originate in the 1970s. In this work, the author examines the polymerization of acetylene from early thermal polymerization studies to the ultimate production of the fully conjugated polyacetylene. Although true polyacetylene was not successfully produced until the 1950s by Giulio Natta, the polymerization of acetylene dates back to 1866 with the work of Marcellin Berthelot. These initial efforts were continued by a range of scientists to produce a polymeric material collectively given the name cuprene in 1900 by Paul Sabatier. Between the initial cuprene studies and the production of true polyacetylene, two related materials were also studied, usually referred to as polyenes and polyvinylenes. Although both of these materials could be thought of as forms of polyacetylene, neither was actually generated from the direct polymerization of acetylene. Readers will gain insight into the fact that polyacetylene and conducting organic polymers have a much longer history than commonly believed and involved the work of a significant number of Nobel Laureates.

Vols. for 1933-42 include an annual directory number; for 1959- an annual roster of realtors.

Includes proceedings of American Association of Textile Chemists and Colorists.
