Common Rail Direct Injection (CRDi): Most modern engine's fuel systems use an advanced technology known as CRDi or Common Rail Direct Injection. Both petrol and diesel engines use a common 'fuel-rail' which supplies the fuel to injectors.

However, in diesel engines, manufacturers refer to this technology as CRDi whereas Petrol engines term it as Gasoline Direct Injection (GDI) or Fuel Stratified Injection (FSI).

...

Common rail direct fuel injection is a direct fuel injection system built around a high-pressure fuel rail feeding solenoid valves, as opposed to a low-pressure fuel pump feeding unit injectors. High-pressure injection delivers power and fuel consumption benefits over earlier lower pressure fuel injection, by injecting fuel as a larger number of smaller droplets, giving a much higher ratio of surface area to volume. This provides improved vaporization from the surface of the fuel

The term 'CRDi' commonly refers to diesel engines. Although, there is a similar technology which the petrol engines also use it is known as Gasoline Direct Injection (GDI) or Fuel Stratified Injection (FSI). Both these technologies have a similarity in design since they consist of a common "fuel-rail" which supply fuel to injectors.

## **TDI Vs CRDi | Diesel Engines In India | Explained**

CRDi stands for Common Rail Direct Injection meaning, direct injection of the fuel into the cylinders of a diesel engine via a single, common line, called the common rail which is connected to all the fuel injectors. Whereas ordinary diesel direct fuel-injection

systems have to build up pressure anew for each and every injection cycle, the new common rail (line) engines maintain constant pressure regardless of the injection sequence.

## **Automobile Technology: CRDI (Common Rail Direct Injection)**

Common rail direct injection or CRDI is now a widely accepted design for diesel engines. Like any other diesel technologies, CRDI has proven to be fuel efficient and boosts the engine's performance. It has a common rail design with the tubes connected to all injectors. This design is

The 1.4 L (1,396 cc) U diesel engine utilizes four cylinders and is made with cast iron block and aluminum cylinder head with chain driven DOHC with 4 valves per cylinder, Bosch common rail direct injection (CRDi), fixed geometry turbocharger (FGT) and intake air swirl control. It is a reduced stroke version of the 1.5L U series with Bore and Stroke at 75 mm × 79 mm (2.95 in × 3.11 in).
