 Extended service intervals, smaller capacity sumps, turbo chargers and thinner, synthetic oils can all add up to higher oil usage. A drop in oil level can do more damage in a modern engine with a smaller sump - oil spends less 'recovery time' in the sump cooling down and hotter oil will break down and oxidise more rapidly leading to increased wear.

 If you need to change your regular oil every 3,000 miles or so, with a fully synthetic you only need to change it every 7,500 or even 10,000 miles. We know of a particular instance where the oil change occurred after about 25,000 miles, although we strongly advice you against pushing your engine this far. The downside is fairly obvious.

Ultimate Guide to Engine Oil - Carbibles
 Walk-behind mowers: Oil capacity is typically 15oz or 18oz*. Change engine oil every 50 hours or annually, which ever comes first.

What type and how much oil for my lawn mower? | Briggs ...
 Engine Oil FAQs What is car engine oil? The primary function of engine oil is to lubricate the internal components of your car's engine. However, it also does a whole host of other tasks such as cooling your engine by more evenly distributing heat, cleaning it using built in oil additive detergents, improving the sealing, and inhibiting corrosion.

Engine Oil | What Oil For My Car? | Opie Oils
 The second number is defined by how an oil flows at normal engine operating temperatures. The smaller the number, the better it will flow. So a 5W-30 will flow easier than a 10W-30 at start-up temperatures and a 10W-30 will flow easier than a 10W-40 at normal engine operating temperatures.
