Definition Biology**

Definition. Genetic engineering or genetic modification is a field of genetics that alters the DNA of an organism by changing or replacing specific genes. Used in the agricultural, industrial, chemical, pharmaceutical, and medical sectors, genetic engineering can be applied to the production of brewing yeasts, cancer therapies, and genetically-modified crops and livestock, among countless other options.

Genetic engineering, also called genetic modification or genetic manipulation, is the direct manipulation of an organism's genes using biotechnology. It is a set of technologies used to change the genetic makeup of cells, including the transfer of genes within and across species boundaries to produce improved or novel organisms.

## **Genetic engineering - Wikipedia**

Genetic engineering, the artificial manipulation, modification, and recombination of DNA or other nucleic acid molecules to modify an organism. The term is generally
