International Encyclopedia of Human Geography, Second Edition embraces diversity by design and captures the ways in which humans share places and view differences based on gender, race, nationality, location and other factors—in other words, the things that make people and places different. Questions of, for example, politics, economics, race relations and migration are introduced and discussed through a geographical lens. This updated edition will assist readers in their research by providing factual information, historical perspectives, theoretical approaches, reviews of literature, and provocative topical discussions that will stimulate creative thinking. Presents the most up-to-date and comprehensive coverage on the topic of human geography Contains extensive scope and depth of coverage Emphasizes how geographers interact with, understand and contribute to problem-solving in the contemporary world Places an emphasis on how geography is relevant in a social and interdisciplinary context

This introduction to the development of new theoretical approaches to human geography sets out to explain the key features of these new approaches, and to trace their antecedents and implications. The authors also highlight points of comparison and contrast, inter-connection and dissimilarity. An introductory chapter describes and accounts for the theoretical diversity present within twentieth-century human geography, and particular attention is paid to the transition from environmental and regional approaches to the spatial science of the 1960s. This chapter then sets the stage for the later chapters, which deal systematically with different post-1960s approaches: Marxism, humanism, realism, structuration and postmodernism. Each of these chapters deals with the chronological development of the appropriate literature, describes the key claims and arguments, and then presents a worked example to illustrate the benefits and pitfalls of an approach in practice. A concluding chapter re-integrates the diverse themes and reflects briefly on possible future theoretical developments in human geography in the 1990s. The principal chapters of the book are framed by both a preface and an epilogue, which address questions about relativism in approaching human geography, while also stressing the need for continued commitment and critical sensitivity in geographical enquiry. The book is written in an easily accessible style with generous expositions of key claims and arguments, and thorough cross-referencing between chapters.

"A book that will delight students... Key Texts in Human Geography is a primer of 26 interpretive essays designed to open up the subject's landmark monographs of the past 50 years to critical interpretation... The essays are uniformly excellent and the enthusiasm of the authors for the project shines through... It will find itself at the top of a thousand module handouts." - THE Textbook Guide "Will surely become a 'key text' itself. Read any chapter and you will want to compare it with another. Before you realize, an afternoon is gone and then you are tracking down the originals." - Professor James Sidaway, University of Plymouth 'An essential synopsis of essential readings that every human geographer must read. It is highly recommended for those just embarking on their careers as well as those who need a reminder of how and why geography moved

from the margins of social thought to its very core." - Barney Warf, Florida State University Undergraduate geography students are often directed to 'key' texts in the literature but find them difficult to read because of their language and argument. As a result, they fail to get to grips with the subject matter and gravitate towards course textbooks instead. Key Texts in Human Geography serves as a primer and companion to the key texts in human geography published over the past 40 years. It is not a reader, but a volume of 26 interpretive essays highlighting: the significance of the text how the book should be read reactions and controversies surrounding the book the book's long-term legacy. It is an essential reference guide for all students of human geography and provides an invaluable interpretive tool in answering questions about human geography and what constitutes geographical knowledge.

This volume provides an up-to-date, authoritative synthesis of the discipline of human geography. Unparalleled in scope, the companion offers an indispensable overview to the field, representing both historical and contemporary perspectives. Edited and written by the world's leading authorities in the discipline Divided into three major sections: Foundations (the history of human geography from Ancient Greece to the late nineteenth century); The Classics (the roots of modern human geography); Contemporary Approaches (current issues and themes in human geography) Each contemporary issue is examined by two contributors offering distinctive perspectives on the same theme

This book cogently examines how human geography has developed from a field with limited self-awareness regarding method and theory to the vibrant study of society and space that it is today. Kevin R. Cox provides an interpretive, critical perspective on Anglo-American geographic thought in the 20th and 21st centuries. He probes the impact of the spatial-quantitative revolution and geography's engagement with other social sciences, particularly in social theory. Key concepts and theories in the field are explained and illustrated with instructive research examples. Cox explores both how new approaches to human geography get constructed and what each school of thought has contributed to understanding the world in which we live.

"Superb! How refreshing to see a Handbook that eschews convention and explores the richness and diversity of the geographical imagination in such stimulating and challenging ways." - Peter Dicken, University of Manchester "Stands out as an innovative and exciting contribution that exceeds the genre." - Sallie A. Marston, University of Arizona "Captures wonderfully the richness and complexity of the worlds that human beings inhabit... This is a stand-out among handbooks!" - Lily Kong, National University of Singapore "This wonderfully unconventional book demonstrates human geography's character and significance not by marching through traditional themes, but by presenting a set of geographical essays on basic ideas, practices, and concerns." - Alexander B. Murphy, University of Oregon "This SAGE Handbook stands out for its capacity to provoke the reader to think anew about human geography ... essays that offer some profoundly original insights into what it means to engage geographically with the world." - Eric Sheppard, UCLA Published in association with the journal Progress in Human Geography, edited and written by the principal scholars in the discipline, this Handbook demonstrates the difference that thinking about the world geographically makes. Each section considers how human geography shapes the world, interrogates it, and intervenes in it. It includes a major retrospective and prospective introductory essay, with three substantive sections on: Imagining Human Geographies Practising Human Geographies Living Human Geographies The Handbook also has an innovative multimedia component of conversations about key issues in human geography – as well as an overview of human geography from the Editors. A key reference for any scholar interested in questions about what difference it makes to think spatially or geographically about the world, this Handbook is a rich and textured statement about the geographical imagination.

Qualitative Change in Human Geography is a collection of studies that tackles concerns about human geography. The papers presented in the book deal with qualitative issues regarding human geography. The text contains eight different discussions that cover topics such as the direction of social practice research and the concept of people, society, and nature in social science. The book covers how economic and political interaction can explain the creation of spatial structure. The text discusses the explanatory theories and ideologies regarding the obsession of policymakers with the inner-city. The book will be of great interest to sociologists, psychologists, and individuals concerned with human geography.

"As a consequence of the powerful critique aimed at the only successful international and state level peace architecture in modernity soon after its post-Cold War apogee, the liberal peace system, has been reshaped from above and below. This system had connected military intervention, human rights, democracy, and capitalism with security, peace and order, and both defined and enabled political emancipation in the modern world. Its 'contrapuntal' processes have married a loose alliance of international and local, formal and informal actors, engaged in what became known in policy and academic terms as peacebuilding. Indeed, more broadly the history of much of the international system is focused implicitly on the production of peace of varying qualities, even as war and competition remain endemic. As Hinsley, once pointed out (echoing many idealist, pacifist, and critical thinkers before him), the aim of planning a 'perpetual peace' is probably as old as war itself. Just war thinking, spanning Aristotle and Cicero to Augustine was an important step along the way, seeking ethical control over war, perhaps through international law. Dante sought a universal peace in his book, Monarchia, written in 1310, but mainly to expand Empire. Marsilius of Padua argued in his book Defensor Pacis in 1326 that world government would not bring peace because it would lead to revolution. Erasmus, in his famous book, The Complaint of Peace, published in 1521, offered the dimension of pacifism and also rejected just war thinking"--
