With the rise of cloud services and the digitization of all business units, procurement managers need to understand how to buy technology services in order to generate revenue, drive innovation and retain customers. The Technology Procurement Handbook provides a structured and logical view of the digital buying process. It includes invaluable advice on how to manage digital demand, prepare sourcing strategies, analyze the cost and benefits of proposed solutions and negotiate and implement comprehensive agreements. The Technology Procurement Handbook examines the multiple streams of data that feed into the technology procurement process, such as ITIL service lifecycle data, PMI project management and cloud and software contract provisions. The book includes case studies and extensive practical advice based on the authors experience from recent procurement projects. There is also a chapter on modular contracting for the US market, explaining the use of agile contracts for IT projects.

Many business-to-business (B2B) managers think that customers act rationally and base decisions mostly on price, customer loyalty isn't considered. Companies outsource various activities, which enable them to improve efficiency, reduce costs, focus more on core competencies and improve their innovation capabilities. Supply Chain Management synchronizes the efforts of all parties—particularly suppliers, manufacturers, retailers, dealers, customers—involved in achieving customer's needs. Despite much research, the relationship between customer loyalty and the supply chain strategy remains insufficiently explored and understood by practitioners and academics, while the theme has been extensively developed within marketing literature. Customer Loyalty and Supply Chain Management is the result of years of work by the authors on different projects concerning the overlapping areas of supply chains, logistics and marketing, drawing a connection between the literature to provide a holistic picture of the customer loyalty framework. Emphasis is given to the B2B context, where recent research has provided some clues to support the fact that investment in operations, new technologies and organizational strategy have had a significant role in understanding B2B loyalty, particularly in the context of global supply chains. Moreover, the book provides a modernized and predictive model of B2B loyalty, showing a different methodological approach that aims at capturing the complexity of the phenomenon. This book will be a useful resource for professionals and scholars from across the supply chain who are interested in exploring the dimension of customer loyalty in the challenging supplier and customer context.

The supply chain is at the heart of every successful business organization's decision-making process. This textbook explains how to create a winning supply chain management strategy by spotlighting how senior executives in European and US companies have turned their supply chains into strategic weapons designed to convert threats, risks and outside pressures into competitive advantages. Strategic Supply Chain Management contains twenty real-world cases, all of which have been field researched by a top author team and tested out in the classroom. Each case adopts an executive leadership perspective to illuminate the real dilemmas faced by managers. The authors draw on their extensive classroom and industry experience to ensure that the writing style is geared towards an executive education readership. This elite case package will provide a complete teaching resource and authentic learning experience for MBA and executive education classes in Supply Chain Management throughout the world.

This book contains papers presented at the 11th Symposium on Computer Aided Process Engineering (ESCAPE-11), held in Kolding, Denmark, from May 27-30, 2001. The objective of ESCAPE-11 is to highlight the use of computers and information technology tools, that is, the traditional CAPE topics as well as the new CAPE topics of current and future interests. The main theme for ESCAPE-11 is process and tools integration with emphasis on hybrid processing, cleaner and efficient technologies (process integration), computer aided systems for modelling, design, synthesis, control (tools integration) and industrial case studies (application of integrated strategies). The papers are arranged in terms of the following themes: computer aided control/operations, computer aided manufacturing, process and tools integration, and new frontiers in CAPE. A total of 188 papers, consisting of 5 keynote and 183 contributed papers are included in this book.
