Look what it's done to the investors who believed in it! •Enter the market at very specific times, and structure trades that capitalize on proven pricing anomalies and distortions. •Master day trading strategies that work in any market conditions, because they don't rely on financial predictions, company results, or market direction. Stock prices have lost all relationship to the underlying performance of the companies they represent: investors who relied on traditional 'buy and hold' strategies have been savaged by the greatest destruction of wealth in the history of the world. But some options traders are earning immense profits right now, even in this generation's worst market and they'll keep profiting no matter how the market moves. How? They trade at very specific times and structure trades to capitalize on well-characterized pricing anomalies and distortions. By doing so, they can generate more profit in one day than most experienced investors realize in a month, sometimes even a year. What's more, they systematically minimize exposure to market risk, including potentially disastrous after-hour market moves. In Day Trading Options, top options trader Jeff Augen shows exactly how you can use these strategies, too. You'll learn why day trading options is more practical than ever, and understand trends in the options market that have leveled the playing field between large institutions and private traders. Augen reveals how to choose candidates for day trading; use new technical indicators that work; spot mispriced options; exploit rapid changes in implied volatility, and much more. Above all, you'll learn how to structure positions that close profitably before the end of trading, so end the day wealthier and more secure than you were in the morning. Jeff Augen, currently a private investor and writer, has spent over a decade building a unique intellectual property portfolio of algorithms and software for technical analysis of derivatives prices. His work includes over 1 million lines of computer code reflecting powerful new strategies for trading options. As founding executive of IBM's Life Sciences Computing business, he defined a growth strategy resulting in \$1.2B of new revenue, and managed \$200M in venture investments.
