Using any text editor create a new file named hello-world.sh containing the below code:

```
#!/bin/bash echo "Hello World". Once ready,
make your script executable with the chmod
command and execute it using relative path
./hello-world.sh : $ chmod +x hello-world.sh
$ linuxconfig.org:~$ ./hello-world.sh Hello
World $.
```

Bash Scripting Tutorial for Beginners - LinuxConfig.org

Usually, a bash script starts with a shebang `#!/usr/bash` which indicates to execute the file using the Bash Shell. Let's say that we want to run a Bash Script that prints "Hello World" and "Good Night World". `#!/usr/bash echo "Hello World" echo "Good Night World"` The script file can be saved as `myscript.sh` where the file extension `.sh` indicates that this is a Bash Script
