An exploration of the elaborate relationship between farmers, aerial sprayers, agriculturalists, crop pests, chemicals, and the environment. The controversies in the 1960s and 1970s that swirled around indiscriminate use of agricultural chemicals—their long-term ecological harm versus food production benefits—were sparked and clarified by biologist Rachel Carson's Silent Spring (1962). This seminal publication challenged long-held assumptions concerning the industrial might of American agriculture while sounding an alarm for the damaging persistence of pesticides, especially chlorinated hydrocarbons such as DDT, in the larger environment. In Chemical Lands: Pesticides, Aerial Spraying, and Health in North America's Grasslands since 1945 David D. Vail shows, however, that a distinctly regional view of agricultural health evolved. His analysis reveals a particularly strong ethic in the North American grasslands where practitioners sought to understand and deploy insecticides and herbicides by designing local scientific experiments, engineering more precise aircraft sprayers, developing more narrowly specific chemicals, and planting targeted test crops. Their efforts to link the science of toxicology with environmental health reveal how the practitioners of pesticides evaluated potential hazards in the agricultural landscape while recognizing the production benefits of controlled spraying. Chemical Lands adds to a growing list of books on toxins in the American landscape. This study provides a unique Grasslands perspective of the Ag pilots, weed scientists, and farmers who struggled to navigate novel technologies for spray planes and in the development of new herbicides/insecticides while striving to manage and mitigate threats to human health and the environment.

Dengue continues to pose a threat to public health in our region. This threat has been recognized by countries throughout the region, which have taken action to protect their populations. National leaders also have acknowledged that they must act regionally in order to protect people within their own borders. The Association of Southeast Asian Nations (ASEAN) and the World Health Organization have formed an effective alliance to achieve a shared goal: a healthy and secure population. One clear sign of this cooperation was seen on 15 June 2011. ASEAN Health Ministers declared that day and each subsequent 15 June to be ASEAN Dengue Day. This important annual event allows ASEAN members, in coordination with WHO, to consolidate dengue prevention and control measures. ASEAN Member States ought to be congratulated for marking the successful launch of ASEAN Dengue Day and for affirming the regional partnership needed to address dengue. This book highlights some of the national and regional events that took place on 15 June 2011 to mark the launching of the first ASEAN Dengue Day.

The story of Schweizer Aircraft is the story of the American dream. Three brothers became enamored with flight during the golden age of aviation. Aviation becomes their passion. In 1930, they design, build, and then teach themselves to fly in their first glider. They pursue their dream and create a company that eventually produces over six thousand aircraft. The company's products make aviation history. Bill Schweizer tells the story of those early years — up to the transition of the company in 1981 to the second generation of Schweizers. Paul H. Schweizer picks up the story from there. The Schweizers' entrepreneurial approach to business and refusal to let go of their dream resulted in the company becoming an industry leader in sailplanes, agricultural spray aircraft, light helicopters, covert surveillance aircraft, and unmanned vehicles. The diversity of its aviation products made it unique. At the time the business was sold to Sikorsky Aircraft in 2004, Schweizer Aircraft was the oldest privately-owned aircraft manufacturer in the world. It is a remarkable story that will inspire others with a passion and a dream.

Every great dish has a center of gravity, a flavor or essence that pulls together other ingredients into a coherent and compelling whole. It's not necessarily the main ingredient but it is fundamentally what the dish is "about". Indian curry spices, fiery Thai chilis, lemony citrus, smoky barbecue rubs: these are all flavors we adore and get our taste buds asking for more. When we talk about wine or alcoholic drinks in any serious way, we talk about flavor too. Flavor is, quite simply, what makes us passionate about food and drink. At last, here is a cookbook that focuses on that fundamental concept. Organized around a dozen or more distinctive tastes, from spicy to citrus to salty to smoky to sweet to bitter and beyond, The Flavor Principle will feature more than 30 complete menus with complementary beverage pairings. Covering flavors from all over the world, this cookbook will be a journey around the globe. Modern and eclectic in approach, The Flavour Principle will appeal to a wide demographic of food and wine lovers. The publication of A Matter of Taste in 2005 set the tone for HarperCollins Canada's cookbook program; The Flavour Principle is meant not just as an update of that venerable publication, but will set a new bar for food and beverage pairing cookbooks.
