of human development and in various clinical disorders. Indeed, topics on different approaches have been included in this book, which makes this book useful for readers to improve their professional performance.

Every two years, the International Association for the Study of Pain publishes a compendium of benchmark papers that summarize the current status of pain research, treatment, and management throughout the world. Presented at the 15th World Congress on Pain in Buenos Aires in October 2014, these papers represent the thinking of the world's top pain scientists and clinicians. IASP distributes this book to participants in the Refresher Courses, and it is now available to pain researchers and clinicians who were unable to attend the Congress.

This book highlights the latest international research on different aspects of medicinal plants and fungi. Studies over the last decade have demonstrated that bioactive compounds isolated from medicinal fungi have promising antitumor, cardiovascular, immunomodulatory, anti-allergic, anti-diabetic, and hepatoprotective properties. In the light of these studies, the book includes chapters (mostly review articles) by eminent researchers from twelve countries across the globe working in different disciplines of medicinal plants and fungi. It discusses topics such as the prevention of major neurodegenerative and neurotoxic mechanisms by *Centella asiatica*; the medicinal properties and therapeutic

applications of several mushrooms species found in different parts of the world; and fungal endophytes as a source of bioactive metabolites including anticancer and cardioprotective agents. There are also chapters on strategies for identifying bioactive secondary metabolites of fungal origin; the use of genomic information to explore the biotechnological potential of medicinal mushrooms; and solid state fermentation of agro-industrial and forestry residues for the production of medicinal mushrooms. It is a valuable resource for the researchers, professionals and students working in the area of medicinal plants and fungi.

No attempt to define the Mediterranean as a region can overlook the multiplicity of political, religious and social forces at work along its shores. Responding to changes in the global and regional environment these forces have interacted in complex ways, as evidenced by their impact on the social, cultural, and political life of the states comprised between the covers of this collaborative volume. The peculiarity of the Mediterranean, as has been noted time and again, lies in its geographical position as a “ sea in the middle of the land ” , where different religions and cultures vie for recognition and self-expression. In the wake of the popular uprisings that have inflamed the region, beginning in Tunisia in December 2010, a drastic reorganisation of their respective state systems is coming into focus in Tunisia, Egypt, and Libya. Though their paths do not run along parallel lines, they share a common denominator: the determination of their people to become the masters of their destinies, and to do so by grappling with new forms of democracy. Almost five years later, after their rulers became the target of violent mass protests, Tunisia, Egypt and Libya are going through an exceptionally difficult transition, trying to accommodate their nascent constitutional forms to the new

forces inspired by the Arab Spring.
