Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America 's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede 's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid 's, handle like a pro 's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension 's condition. He outlines testing procedures that will help you gauge how well you 're improving your suspension, along with your riding. And, if you 're inclined to perfect your bike 's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto-promising a solution to virtually any handling problem.

In their successful text, Shen and Kong cover fundamentals of static and dynamic electromagnetism fields and waves. The authors employ a unique approach, beginning with a study of Maxwell's equations and waves and covering electromagnetic fields later. This presentation allows students to work with electromagnetic concepts using relatively simple computational analysis, building in a logical progression to more complex topics and mathematical methods for analysis. The Third Edition provides computer-based problems, homework problems, end-of-chapter summaries, and a rich collection of real-world application examples that include discussion of cellular phone and microwave exposure limits set by IEEE; safety concerns about electromagnetic fields from power lines; new and powerful magnets; and single-mode optical fibers.
