Zeolites, also commonly known as

Download Free Zeolite Type Crystal Structures And

Molecular sieves, are crystalline microporous materials primarily made up of SiO_4 and AlO_4 corner-sharing tetrahedral building units. These are grown to form three-dimensional (3D) crystalline frameworks with well-defined channels and cavities of molecular dimensions. In application,

Download Free Zeolite Type Crystal Structures And

Their pore openings are utilized to selectively adsorb molecules smaller than the pore size and reject any molecules larger than the pore size.

Type A and X Zeolites

Zeolites are microporous, aluminosilicate minerals commonly

Download Free Zeolite Type Crystal Structures And

used as commercial adsorbents and catalysts. The term zeolite was originally coined in 1756 by Swedish mineralogist Axel Fredrik Cronstedt, who observed that rapidly heating the material, believed to have been stilbite, produced large amounts of steam from water that had been

Download Free Zeolite Type Crystal Structures And

adsorbed by the material. Based on this, he called the material zeolite, from the Greek ???, meaning "to boil" and ?????, meaning "stone". The classic...

Zeolite - Wikipedia

Zeolites are from the family of

Download Free Zeolite Type Crystal Structures And

aluminium silicate that's known as
molecular sieves. These are micro-
porous solids because they have the
ability to sort molecules selectively
based on a process of size exclusion.
Natural Zeolites come from volcanic
rocks, ash layers, and alkaline ground
water.
